

Transition énergétique Québec is a public corporation created as part of Québec's 2030 Energy Policy to ensure Québec's energy transition. Its mission is to support, encourage, and promote energy transition, innovation, and efficiency, and to coordinate the implementation of all the programs and measures required to meet the energy targets set out by the Government of Québec.

A collaboration agreement with Sustainable Development Technology Canada simplifies the procedure by allowing applicants to file a **joint financial assistance application** for the two programs.

# Transition énergétique Québec

# Technoclimat Energy and Greenhouse Gas Emission Reduction Innovation Support Program

TE004-01a-1902

# Technoclimat

The objective of this program is to encourage the development, in Québec, of technological innovation in the areas of energy efficiency, renewable energies, bioenergies and greenhouse gas (GHG) emission reductions by offering financial assistance to project promoters who wish to demonstrate the potential of a technological innovation.

It also promotes the testing in Québec of technologies that are either unavailable or not widely available on the Québec market.

## Clientele

This program is intended for businesses and organizations established in Québec.

## Eligible projects

Projects must target:

- › a pre-commercial technological innovation (technology readiness level of 4 to 7) in the area of energy efficiency, renewable energies, bioenergies or GHG emission reductions;
- or
- › the testing of a technology in the area of energy efficiency, renewable energies, bioenergies or GHG emission reductions that is not currently available on the Québec market or that has very limited availability. Québec-specific conditions must justify the testing.

They must also:

- › feature a technology with market potential;
- › target a technology that will have an energy or GHG emission reduction impact in Québec;
- › be undertaken in Québec, unless there is sufficient evidence to show the need to carry out certain activities outside Québec;
- › include measuring activities.

## Duration of the project

The project must be completed within no more than 60 months of the entry into effect of the agreement.

## Financial assistance

The financial assistance granted once the project has been accepted may cover **up to 50% of eligible expenses**. The maximum amount granted for a project is \$3 million.

The total amount of financial assistance obtained in connection with the project from government departments and agencies (federal and provincial), energy distributors and Technoclimat must not exceed 75% of total eligible expenses.

**Eligible expenses** are itemized in the program's normative framework.
